

COMMUNICATIONS FOR TODAY ... AND TOMORROW.

TekTone® Onsite Training Requirements

Thank you for interest in providing training at your facility for the TekTone Tek-CARE® product line. Our instructors have many years of technical experience with our nurse call and wireless emergency call systems.

Allow four full days for each training session. Equipment will be shipped in advance and the instructor will arrive on Monday to get everything set up. The class will run Tuesday-Friday. Maximum class size will be 8 for certification, others may be allowed to “audit” the class based on area of interest. (Please note table space requirements shown below.) Consecutive sessions are available at a discounted rate.

Please have the following ready, so that we can get the most out of the time allotted:

- A suitable meeting room with adequate work space for trainees.
- Three additional 8' tables for demonstration equipment.
- A projection screen and white board (blackboard or easel) for notes and drawings.
- A projector. (If you do not have a projector, let us know in advance and we will bring one.)
- For each trainee: A set of tools typical for this type of work, such as strippers, crimps, cutters, meter, RJ style connection tool, cable tester, laptop, etc.
- For smaller classes each trainee should have a windows laptop. For larger classes one laptop per two trainees will suffice.
- Spare or scrap 18–22 AWG multi-conductor wire, CAT5 or CAT6 wire, crimp connectors, 8P8C connectors and 6P6C connectors for the hands-on portion of training. These will be required on the first day of class.

Please also make arrangements to have lunch delivered to the meeting room so that training can continue with minimal interruption.
